---

## OPERATION, CARE AND MAINTENANCE

### OPERATION

Operation of the blind is through a spring system operated by the handle at the bottom of the blind. The blind simply pulls down through the side channels locking whenever the handle is released. The handle is then pushed in towards the window releasing the lock which enables the spring to retract the fabric. It complies fully with all relevant child safety standards.

### CARE INSTRUCTIONS

To keep your blinds looking their best for years to come, always ensure that they have been securely fitted, use a synthetic or feather duster and refrain from using soap and water. Should any part of the blind fail please contact our dedicated Customer Service team who can help.

### MAINTENANCE

All our blind components are manufactured using aluminium and plastic. They do not present any corrosion problems in normal environments. The system has been designed for smooth operation, together with rigidity to prolong the window blind's working life. Manufacturing and installation guidelines for the size restrictions for each type of installation are included in this specified brochure.

---

## CHILD SAFETY

Being a family run business, we know the importance of safety in a home. That's why every one of our designs is guided by our own 'Safe by Design' principles and fully comply with the latest European directives. Consequently many of our blinds have no cords or chains which could act as a choking hazard and those which are chain operated come with a wall secure system which prevents cords from becoming loose.
